

FCC REPORT

(Base Station)

Applicant: Baicells Technologies Co., Ltd.

Address of Applicant: 3F, Hui Yuan Development Building, No.1 Shangdi Information Industry Base, Haidian Dist., Beijing, China

Equipment Under Test (EUT)

Product Name: LTE-TDD Base Station

Model No.: mBS1100

Trade mark: BaiCells

FCC ID: 2AG32MBS1100

IC ID: 20982-MBS1100

FCC CFR Title 47 Part 2

FCC CFR Title 47 Part90 Subpart Z

RSS-Gen Issue 4, November 2014

RSS-197 Issue 1, February 2010

Date of sample receipt: 14 Dec., 2015

Date of Test: 15 Dec., 2015 to 25 Mar., 2016

Date of report issued: 29 Mar., 2016

Test Result: PASS*

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Bruce Zhang

Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the CCIS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

4. Test Summary

Test Item	Section in CFR 47		Result
	FCC	IC	
RF Output Power	Part 2.1046 Part 90.1321	RSS Gen Section 6.12 RSS 197 section 5.6	Pass
Modulation Characteristics	Part 2.1047	RSS 197 section 5.1	Pass
99% & -26 dB Occupied Bandwidth	Part 2.1049 Part 90.209	RSS Gen section 6.6	Pass
Emission Mask	Part 90.210(b)	Not applicable	Pass
Spurious Emissions at Antenna Terminal	Part 2.1051 Part 90.1323	RSS Gen Section 6.13 RSS 197 section 5.7	Pass
Field Strength of Spurious Radiation	Part 2.1053 Part 90.1323	RSS Gen Section 6.13 RSS 197 section 5.7	Pass
Frequency stability vs. temperature	Part 2.1055(a)(1)(b) Part 90.213(a)	RSS Gen section 6.11 RSS 197 section 5.3	Pass
Frequency stability vs. voltage	Part 2.1055(d)(1)(2) Part 90.213(a)	RSS Gen section 6.11 RSS 197 section 5.3	Pass

Pass: The EUT complies with the essential requirements in the standard.

5. General Information

5.1 Client Information

Applicant:	Baicells Technologies Co., Ltd.
Address of Applicant:	3F, Hui Yuan Development Building, No.1 Shangdi Information Industry Base, Haidian Dist., Beijing, China
Manufacturer	Baicells Technologies Co., Ltd.
Address of Manufacturer:	3F, Hui Yuan Development Building, No.1 Shangdi Information Industry Base, Haidian Dist., Beijing, China

5.2 General Description of E.U.T.

Product Name:	LTE-TDD Base Station
Model No.:	mBS1100
Operation Frequency range:	3655MHz~3695MHz
Modulation type:	BPSK,QPSK,16QAM,64QAM
Antenna type:	External antenna ("N" type)
Antenna gain:	7 dBi
Power supply:	DC 48V

Test Channle:

10MHz		20MHz	
Channel:	Frequency (MHz)	Channel:	Frequency (MHz)
Lowest	3655	Lowest	3660
Middle	3675	Middle	3675
Highest	3695	Highest	3690

5.3 Test modes

Data mode (QPSK)	Keep the EUT in data communicating mode (QPSK). (10MHz, 20MHz)
Data mode (64QAM)	Keep the EUT in data communicating mode (64QAM). (10MHz, 20MHz)

5.4 Description of Support Units

Manufacturer	Description	Model	Serial Number	FCC ID/DoC
INVENTRONICS®	LED DRIVER	EUV-200S048SV	N/A	N/A

5.5 Related Submittal(s) / Grant (s)

FCC: This submittal(s) (test report) is filing to comply with Section Part 90 subpart Z of the FCC CFR 47 Rules.
IC: This submittal(s) (test report) is filing to comply with RSS 197

5.6 Test Methodology

FCC: Both conducted and radiated testing were performed according to the procedures document on TIA/EIA 603 and FCC CFR 47.1046, 2.1047, 2.1049, 2.1051, 2.1053, 2.1055 and 2.1057
IC: Both conducted and radiated testing were performed according to RSS Gen, RSS 197, ANSI C63.10:2009.

5.7 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **FCC - Registration No.: 817957**

Shenzhen Zhongjian Nanfang Testing Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 817957, February 27, 2012.

- **IC - Registration No.: 10106A-1**

The 3m Semi-anechoic chamber of Shenzhen Zhongjian Nanfang Testing Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

- **CNAS - Registration No.: CNAS L6048**

Shenzhen Zhongjian Nanfang Testing Co., Ltd. is accredited to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6048.

5.8 Laboratory Location

Shenzhen Zhongjian Nanfang Testing Co., Ltd.

Address: No.B-C, 1/F., Building 2, Laodong No.2 Industrial Park, Xixiang Road,

Bao'an District, Shenzhen, Guangdong, China

Tel: +86-755-23118282

6. System test configuration

6.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the commission's requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

6.2 EUT Exercise

The EUT (Transmitter) was operated in the engineering mode to fix the Tx frequency which was for the purpose of the measurements.

6.3 Configuration of Tested System

6.4 Description of Test Modes

The EUT has been tested under operating condition.

EUT staying in continuous transmitting mode. Channel Low, Mid and High for each type band with rated data rate were chosen for full testing.

The field strength of spurious radiation emission was measured as EUT stand-up position (H mode) and lie down position (E1, E2 mode) for three modes with power adaptor, earphone and Data cable. The worst-case H mode.

6.5 Transmit Output Power and PSD

Test Requirement:	FCC part90.1321(a) and RSS-197 Clause 5.6.2
Test Method:	FCC part2.1046 and RSS Gen section 6.12
Limit:	<p>FCC:</p> <p>(a) Base and fixed stations are limited to 25 watts/25 MHz equivalent isotropically radiated power (EIRP). In any event, the peak EIRP powerdensity shall not exceed 1 Watt in any one-megahertz slice of spectrum.</p> <p>(b) In addition to the provisions in paragraph (a) of this section, transmitters operating in the 3650-3700 MHz band that emit multipledirectional beams, simultaneously or sequentially, for the purpose of directing signals to individual receivers or to groups of receivers provided theemissions comply with the following:</p> <p>(1) Different information must be transmitted to each receiver.</p> <p>(2) If the transmitter employs an antenna system that emits multiple directional beams but does not emit multiple directional beamssimultaneously, the total output power conducted to the array or arrays that comprise the device, <i>i.e.</i>, the sum of the power supplied to allantennas, antenna elements, staves, etc. and summed across all carriers or frequency channels, shall not exceed the limit specified in paragraph(a) of this section, as applicable. The directional antenna gain shall be computed as follows:</p> <p>(i) The directional gain, in dBi, shall be calculated as the sum of 10 log (number of array elements or staves) plus the directional gain, in dBi,of the individual element or stave having the highest gain.</p> <p>(ii) A lower value for the directional gain than that calculated in paragraph (b)(2)(i) of this section will be accepted if sufficient evidence ispresented, <i>e.g.</i>, due to shading of the array or coherence loss in the beam-forming.</p> <p>(3) If a transmitter employs an antenna that operates simultaneously on multiple directional beams using the same or different frequencychannels and if transmitted beams overlap, the power shall be reduced to ensure that the aggregate power from the overlapping beams does notexceed the limit specified in paragraph (b)(2) of this section. In addition, the aggregate power transmitted simultaneously on all beams shall notexceed the limit specified in paragraph (b)(2) of this section by more than 8 dB.</p> <p>(4) Transmitters that emit a single directional beam shall operate under the provisions of paragraph (b)(2) of this section.</p> <p>IC:</p> <p>5.6.2 The maximum transmitter output power density of equipment, other than mobile and portableequipment, shall not exceed 1W in any 1 MHz bandwidth.</p> <p>5.6.3 In addition, equipment, other than mobile and portable equipment, employing antenna systems that emit multiple directional beams, simultaneously or sequentially, for the purpose ofdirecting signals to individual receivers or to groups of receivers, shall comply with therequirements in SRSP-303.65.</p>
Test Procedure:	RBW=1MHz, VBW=3MHz, Detector mode= RMS , Trace mode: Power averaging over 100 sweeps
Test Instruments:	Refer to section 5.8 for details
Test mode:	Refer to section 5.3 for details
Test results:	Passed

6.6 Occupy Bandwidth

Test Requirement:	FCC part 90.209 and RSS-Gen 6.6
Test Method:	FCC part 2.1049 and RSS-Gen 6.6
Test Procedure:	<ol style="list-style-type: none">1. The EUT's output RF connector was connected with a short cable to the spectrum analyzer2. The transmitter shall be operated at its maximum carrier power measured under normal test conditions.3. The span of the analyzer shall be set to capture all products of the modulation process, including the emission skirts.4. The resolution bandwidth (RBW) shall be in the range of 1% to 5% of the occupied bandwidth (OBW) and video bandwidth (VBW) shall be approximately 3x RBW.
Test Instruments:	Refer to section 5.8 for details
Test mode:	Refer to section 5.3 for details
Test results:	Passed

Middle channel

The screenshot displays an Agilent Spectrum Analyzer interface. The top header shows "Agilent Spectrum Analyzer - Occupied BW". The main display area shows a signal plot with a reference level of 30.00 dBm. The plot shows a signal rising from approximately -40 dBm to 30 dBm over time. Below the plot, the following parameters are listed:

Center Freq	3.6900000000 GHz	Span	40 MHz
#Res BW	200 kHz	Sweep	1.267 ms
Occupied Bandwidth		Total Power	26.5 dBm
Transmit Freq Error	27.642 kHz	OBW Power	99.00 %
x dB Bandwidth	18.84 MHz	x dB	-26.00 dB

On the right side, there are two vertical panels: one for "Frequency" and another for "CF Step". The "Frequency" panel shows "Center Freq 3.6900000000 GHz". The "CF Step" panel shows "CF Step 4.000000 MHz" and "Auto Man". At the bottom, there are "MDO" and "STATUS" buttons.

Highest channel

6.7 Emission Mask

Test Requirement:	FCC part 90.210(b)
Limit:	Emission Mask B. For transmitters that are equipped with an audio low-pass filter, the power of any emission must be attenuated below the unmodulated carrier power (P) as follows: (1) On any frequency removed from the assigned frequency by more than 50 percent, but not more than 100 percent of the authorized bandwidth: At least 25 dB. (2) On any frequency removed from the assigned frequency by more than 100 percent, but not more than 250 percent of the authorized bandwidth: At least 35 dB. (3) On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least $43 + 10 \log (P)$ dB.
Test Procedure:	1 The RF output of the transceiver was connected to a spectrum analyzer through appropriate attenuation. 2 RBW=100kHz, VBW=1MHz, Detector mode= RMS, Trace mode: Power averaging over 100 sweeps
Test Instruments:	Refer to section 5.8 for details
Test mode:	Refer to section 5.3 for details
Test results:	Passed

6.8 Out of band emission at antenna terminals

Test Requirement:	FCC part90.1323 and RSS-197 Clause 5.7
Test Method:	FCC part2.1051 and RSS Gen Section 6.13
Limit:	-13dBm
Test Procedure:	<ol style="list-style-type: none">1 The RF output of the transceiver was connected to a spectrum analyzer through appropriate attenuation.2 The resolution bandwidth of the spectrum analyzer was set at 100 kHz when below 1GHz, 1MHz when above 1 GHz; sufficient scans were taken to show the out of band Emissions if any up to 10th harmonic.3 For the out of band: Set the RBW=100 kHz, VBW=300 kHz when below 1 GHz, RBW =1 MHz, VBW=3 MHz when above 1 GHz, Start=30MHz, Stop= 10th harmonic.4 Band Edge Requirements: In the 1 MHz bands immediately outside and adjacent to the frequency block, a resolution bandwidth of at least 1 percent of the emission bandwidth of the fundamental emission of the transmitter may be employed to measure the out of band Emissions.
Test Instruments:	Refer to section 5.8 for details
Test mode:	Refer to section 5.3 for details
Test results:	Passed
Remark:	During the test, pre-scan the QPSK, 64QAM modulation, and found the QPSK modulation(10MHz/20MHz middle channel) is the worst case.

6.9 Field strength of spurious radiation measurement

Test Requirement:	FCC part22.917(a), FCC part24.238(a)
Test Method:	FCC part2.1053
Limit:	-13dBm
Test setup:	<p>Below 1GHz</p> <p>Above 1GHz</p> <p>Substituted method:</p>
Test Procedure:	<ol style="list-style-type: none"> The EUT was placed on an non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer. During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations. The frequency range up to tenth harmonic was investigated for each of three fundamental frequency (low, middle and high channels). Once spurious emission was identified, the power of the emission was determined using the substitution method.

	4. The spurious emissions attenuation was calculated as the difference between radiated power at the fundamental frequency and the spurious emissions frequency. ERP / EIRP = S.G. output (dBm) + Antenna Gain(dB/dBi) – Cable Loss (dB)
Test Uncertainty:	± 4.88 dB
Test Instruments:	Refer to section 5.8 for details
Test mode:	Refer to section 5.3 for details.
Test results:	Passed
Remark:	During the test, pre-scan the QPSK, 64QAM modulation, and found the QPSK modulation is the worst case.

Limit:	<p>IC:</p> <p>The transmitter frequency stability limit shall be determined as follows:</p> <p>(a) The frequency offset shall be measured according to the procedure described in RSS-Gen and recorded;</p> <p>(b) Using a resolution bandwidth of 1% of the occupied bandwidth, a reference point at the unwanted emission level specified in Section 5.7 on the emission mask of the lowest and highest channel shall be selected, and the frequency at these points shall be recorded as f_L and f_H respectively.</p> <p>The applicant shall ensure frequency stability by showing that f_L minus the frequency offset and f_H plus the frequency offset shall be within the 3650-3700 MHz band.</p>																																																									
Test setup:	<p>Note : Measurement setup for testing on Antenna connector</p>																																																									
Test procedure:	<ol style="list-style-type: none"> 1. The equipment under test was connected to an external DC power supply and input rated voltage. 2. RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators. 3. The EUT was placed inside the temperature chamber. 4. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT 25°C operating frequency as reference frequency. 5. Turn EUT off and set the chamber temperature to -30°C. After the temperature stabilized for approximately 30 minutes recorded the frequency. 6. Repeat step measure with 10°C increased per stage until the highest temperature of +50°C reached 																																																									
Test Instruments:	Refer to section 5.8 for details																																																									
Test mode:	Refer to section 5.3 for details																																																									
Test results:	Passed																																																									
Remark:	All three channels of all modulations have been tested, but only the worst channel and the worst modulation show in this test item.
